Introduction

YC4A series engine is a classic engine product developed by Yuchai, which is well-known and highly recognized in the market and has market holdings of more than 400,000 sets. YC4A100Z-D20 engines for generator sets, developed based on YC4A engines, have advantages such as high reliability, durability, energy-saving and environment-friendly, compact structure, strong transient loading capacity and easy maintenance.

Product Features

- The main structures, such as engine body, are time-tested, which ensures the high reliability of the whole engine.
- Crankshaft torsional vibration damper is optimized, reducing torsional vibration of the shaft system.
- Damping gears and gear room structure are optimized, reducing the noise of the entire engine.
- Advanced and mature high-efficiency turbocharged & intercooled technology is adopted, ensuring sufficient air inflow and ensuring sufficient combustion of the diesel engine with low fuel consumption and less emission under different load conditions.
- With electronic speed governing, requirements for generator unit performance grade G3 are satisfied.

Product Service

- Service: Yuchai has built the largest service network in the industry with the minimum service radius, the most extensive “three guarantees” and the shortest response time. 49 global offices are set up, including 14 overseas offices in Europe, Africa and South America etc. Besides, 108 overseas service agents, more than 3,000 service stations and 5,000 sales networks of fittings are established, providing the users with satisfying and considerate services.
- 24h global service hotline: +86 95098.

✧ Notes:

1. Prime Power: which corresponds to the basic power (PRP) described in ISO 8528. Implement the maintenance according to the Yuchai's requirement, maximum power of variable load continuous output unlimited time. The average output power shall not exceed 70% of the prime power in every 24 hours of operation.
   Standby Power: In correspondence with the emergency standby power (ESP) stated in ISO 8528. Implement the maintenance according to the Yuchai's requirement, maximum power at a variable load in the event of a main power network failure up to a maximum of 200 hours per year. The average output power shall not exceed 70% of the standby power in every 24 hours of operation.
2. The engine power data stated in the table is the measured performance under the condition stated in ISO 8528-1 and ISO 3046.
3. The power output of the generator unit is calculated according to the efficiency of the AC generator. Thus, it is for reference only.
4. The kVA and kW values are converted as per standard power factor 0.8.
5. The information mentioned above is the latest one, however, the relevant information may be altered after publication.
